Summary

Full-Stack Developer specializing in high-performance Java/Spring Boot backends with hands-on experience building real-time using WebSockets, Redis, and PostgreSQL. Strong foundation in DSA, system design, and containerized deployments. Looking for a way to apply engineering depth in a backend-focused role.

Technical Skills

Languages: Java, TypeScript, Python
Backend: Spring Boot, Spring Security, REST APIs, WebSocket (STOMP), JWT, OAuth2
Frontend: React, Next.js, Tailwind CSS
Databases: PostgreSQL, MySQL, Redis
DevOps & Tools: Docker, Linux, Git, Maven, Gradle, Postman
Core Concepts: Data Structures & Algorithms, OOP, System Design, Concurrency

Projects

Pokeverse — Aug 2025 – Dec 2025

Real-Time Multiplayer Game Platform

- Architected a scalable real-time multiplayer game platform handling concurrent sessions across multiple game types using WebSocket (STOMP) with custom room and session lifecycle management.
- Reduced state-read latency by integrating Redis as an in-memory cache layer, offloading hot-path data from PostgreSQL for persistent storage.
- Implemented a dual-token authentication system (JWT access + refresh tokens) with OAuth2 social login, enabling secure, stateless communication across distributed services.

Hermes — Jan 2025 – Mar 2025

Real-Time Chat Application

- Built a production-grade real-time chat system supporting 1:1 and group conversations with live user presence tracking via WebSocket-based messaging pipeline.
- Designed a stateless JWT authentication flow with email verification and self-service password recovery, secured via Spring Security filter chains.
- Containerized the full application stack with Docker, achieving environment parity across local development and deployment.

Calculate — May 2025 – Jun 2025

Scientific Expression Calculator

- Engineered a scientific expression evaluator supporting 50+ mathematical functions and operators, implementing the Shunting-Yard algorithm for correct infix-to-postfix conversion and stack-based evaluation.
- Designed a modular pipeline — tokenizer → parser → evaluator — enabling clean extensibility and full coverage of edge cases including operator precedence conflicts and nested sub-expressions.

Education

DAV Institute of Management — Faridabad, Haryana

Bachelor of Computer Applications (BCA) | Affiliated to MDU Rohtak — *2023 – 2026*

- Relevant Coursework: Data Structures & Algorithms, Operating Systems, Database Management Systems

Highlights

Solved **300+ DSA problems** on LeetCode with focus on Trees, Graphs, and Dynamic Programming.

Completed **Java Spring Framework & Spring Boot** certification course on Udemy.

Actively studying **distributed systems**, DevOps practices, and scalable system design patterns.
