SUMMARY

Full-stack developer with experience building and deploying web applications, backend systems, and cloud-native infrastructure. Worked across the stack using React, Next.js, TypeScript, Java, and Spring Boot, with hands-on experience in Docker, Kubernetes, and CI/CD automation. Built projects ranging from real-time communication platforms and AI-powered tools to distributed systems, taking them from design and development through deployment and operations.

TECHNICAL SKILLS

Languages: Java, TypeScript, Python, Shell Scripting
Backend: Spring Boot, Spring Security, WebSocket, REST APIs, JWT, OAuth2, Express.js
Frontend: React, Next.js, Tailwind CSS, Zustand
Databases: PostgreSQL, MySQL, Redis
Cloud & DevOps: Docker, Kubernetes, Terraform, Ansible, GitHub Actions, GCP, Prometheus, Grafana
AI & Tools: Google Gemini API, OpenRouter, Prisma ORM, Git, Maven, Postman

PROJECTS

- AlgoForge** | *Express, Next.js, PostgreSQL, Google Gemini* | 🏠 GitHub May 2026 – Jun 2026
- Developed an AI-powered platform that analyzes pasted code and returns a full complexity report including time and space complexity, bottlenecks, anti-patterns, and an AI-generated optimized rewrite.
 - Cut AI API costs by caching results for identical code submissions, so repeated requests are served instantly without calling the AI provider again.
 - Designed the system to support multiple AI providers interchangeably, so switching from one provider to another requires only a configuration change, not code changes.
 - Built a step-by-step algorithm visualizer that animates how data structures change during execution, allowing users to replay any algorithm frame by frame in the browser.
- Hermes** | *Spring Boot, React, MySQL, Redis, GCP* | 🏠 GitHub | 🌐 Live Demo Jan 2025 – Present
- Built a real-time chat application supporting private and group messaging, live presence indicators, file sharing, and typing notifications — deployed live on Google Cloud using Kubernetes.
 - Implemented end-to-end encryption so that private messages are encrypted on the sender's device and decrypted only on the recipient's device — the server never sees the message content.
 - Set up a fully automated deployment pipeline that runs tests, scans for security vulnerabilities, builds Docker containers, and deploys updates to the cloud with zero manual steps.
 - Supported login via Google account or email with OTP verification, with rate limiting and strict network security policies applied across all services.
- Pokeverse** | *Spring Boot, Next.js, PostgreSQL* | 🏠 GitHub Aug 2025 – Dec 2025
- Built a multiplayer game platform that handles player login, room creation, live event broadcasting, and in-game chat as shared infrastructure — demonstrated with a real-time multiplayer Pokémon Quiz.
 - Used two separate databases: one for permanent records like game history and player profiles, and one for fast in-memory access to live session data during active gameplay.
- Calculate** | *Python, Algorithms, Data Structures* | 🏠 GitHub May 2025 – Jun 2025
- Built a scientific calculator from scratch supporting 50+ functions and 70+ operators with correct handling of operator precedence, nested expressions, and edge cases — validated with 100+ test cases and no external math libraries.
 - Published a technical article on Medium explaining how the underlying algorithm works, written for a general engineering audience.

EDUCATION

DAV Institute of Management — Affiliated to MDU Rohtak Faridabad, Haryana
Bachelor of Computer Applications (BCA) Aug 2023 – Jun 2026

HIGHLIGHTS & CERTIFICATIONS

- Solved **300+** problems on LeetCode with a focus on Trees, Graphs, and Dynamic Programming.
- Completed Java Spring Framework, Spring Boot, and Spring AI Certification (Udemy).
- Earned Google Cloud Skill Badge: Build Real World AI Applications with Gemini.
- Earned Google Cloud Skill Badge: Prompt Design in Vertex AI.
- Published a technical article on Medium explaining the Shunting-Yard algorithm and expression parsing.
